

Offline-first logistics command for operations that cannot wait for connectivity.

A Windows desktop platform for inventory, demands, approvals, procurement, QR workflows, assets, accounts, audit trails, reporting, backup, and controlled offline synchronization.

What a pilot proves

- Work continues without internet
- Every request and approval is attributable
- Stock movement and QR lookup are traceable
- Roles separate technicians, officers, logistics, accounts, vendors, and admins
- Data stays locally controlled with backup and audit options

Pilot package

14-day trial • Demo dataset • Guided onboarding • Success checklist • Optional paid activation

Core workflow

1. Raise	2. Approve	3. Procure	4. Receive	5. Issue	6. Audit
----------	------------	------------	------------	----------	----------
